Free checklist

10 Amazon margin leaks

Review your account in one afternoon and find where your money is going.

Each item has three parts: why it costs you money, where to check it, and what to do. Tick the ones you find in your account. If you tick three or more, there's margin you can win back.

Seller Central menus change often. If you can't find a report under the name we use here, search for it by name in the Seller Central search bar.

☐ 01

Search terms that spend and don’t sell

Why it costs you money

Your campaigns keep paying for clicks on searches that never convert. It's money leaving every day without anyone noticing.

Where to check

Advertising console > Reports > Search term report, last 60 days.

What to do

Filter for terms with clicks and zero orders. As a rule of thumb, if your conversion rate is 10%, 20 clicks without a sale is already a clear signal. Add them as exact negatives.

☐ 02

A “good” ACoS that loses money

Why it costs you money

A 30% ACoS looks healthy, but if your margin before advertising is 25%, every sale that comes from an ad costs you money.

Where to check

Your P&L by product: selling price, product cost, and Amazon fees.

What to do

Work out your break-even ACoS: (price − product cost − Amazon fees) ÷ price. Example: $30 − $8 − $10 = $12, and $12 ÷ $30 = 40%. Above that number, the campaign loses money on every sale.

03

Auto campaigns nobody harvests

Why it costs you money

Auto campaigns find good search terms, but if nobody moves them into manual campaigns, you keep paying for them without controlling the bid.

Where to check

The search term report, filtered by your auto campaigns.

What to do

Move terms that already sell into a manual exact-match campaign and add them as negatives in the auto campaign.

04

Keywords your product doesn’t show up for

Why it costs you money

If Amazon doesn't associate your product with a search, you won't appear in it, no matter how much you bid.

Where to check

In the Amazon search bar, type your ASIN together with the keyword, for example: B0XXXXXXXX laptop stand. If your product doesn't appear, it isn't indexed for that keyword.

What to do

Put your main keywords in the title and bullets, and secondary ones in the backend search terms (under 250 bytes on Amazon US).

05

Listings that don’t answer shoppers’ questions

Why it costs you money

If your images and A+ Content don't answer what shoppers ask, they buy from the competitor who does. You pay for the click and lose the sale.

Where to check

Negative reviews on your product and your top 3 competitors, plus the customer questions on the listing.

What to do

List the 3 questions that come up most and make sure each one is answered in your images or A+ Content.

06

Promotions that stack by accident

Why it costs you money

A coupon, a sale price, and a deal can all apply at the same time. What you planned as a 15% discount can end up much deeper.

Where to check

The Coupons, Promotions, Deals, and Prime Exclusive Discounts pages, reviewed together for the same dates.

What to do

Before every event, check which discounts will be live at the same time on each product and pause the ones that shouldn't stack.

07

Stockouts

Why it costs you money

Without stock, the product stops selling, its ads stop showing, and when it comes back it usually takes time to regain its search position.

Where to check

Inventory > Inventory Planning, in each product's days of supply.

What to do

Work out when to reorder from your production and shipping lead time plus a safety buffer, and ship to FBA before you run out, not when you run out.

08

Inventory aging in FBA

Why it costs you money

Amazon charges extra fees on inventory that sits in its warehouses too long. That's margin leaving without selling a single extra unit.

Where to check

Inventory > Inventory Planning, under Inventory Age.

What to do

Find the products approaching the surcharge tiers and move them with a promotion, adjust your next restock, or request a removal.

09

Overcharged FBA fees and unreimbursed units

Why it costs you money

If Amazon recorded larger dimensions or weight than the real ones, you pay a higher FBA fee on every sale. And not every unit lost or damaged in its warehouses gets reimbursed automatically.

Where to check

The Fee Preview report, plus the Inventory Ledger and Reimbursements reports.

What to do

Compare Amazon's dimensions with the real ones and request a re-measurement if they don't match. Open cases for lost or damaged units within the window Amazon allows.

10

Returns nobody diagnoses

Why it costs you money

Every return costs you shipping, sometimes a processing fee, and the unit itself if it can't be resold. If one reason keeps repeating, the problem is usually the listing or the packaging.

Where to check

The Voice of the Customer dashboard and the FBA customer returns report, with the reason for each return.

What to do

Group the reasons. If “not as expected” or a sizing issue keeps coming up, fix the images, the description, or the size chart.

Your summary

Write down what you found and roughly what it costs you each month. Start with the biggest one.

	Leak	Found it?	Estimated monthly cost	Priority
01	Search terms that spend and don't sell			
02	A “good” ACoS that loses money			
03	Auto campaigns nobody harvests			
04	Keywords your product doesn't show up for			
05	Listings that don't answer shoppers' questions			
06	Promotions that stack by accident			
07	Stockouts			
08	Inventory aging in FBA			
09	Overcharged FBA fees and unreimbursed units			
10	Returns nobody diagnoses			

Ticked three or more?

Each leak looks small on its own. Together, they're often the difference between growing sales and growing profit. In a 30-minute audit we review your account with you and send you written findings, ranked by what's costing you the most.
